MUHAMMAD ARSLAN

SOFTWARE QUALITY ASSURANCE ENGINEER

📞 +923099731256 | ✉️ marslan5103@gmail.com | 📍 Raiwind, Lahore | 🔗 LinkedIn

SUMMARY

Software Quality Assurance Engineer with 1 year of experience testing web applications in Agile/Scrum environments. Skilled in functional, regression, integration, smoke, and exploratory testing, along with defect lifecycle management and test case design. Hands-on experience in Playwright automation, API testing, and Jira for bug tracking. Strong understanding of SDLC/STLC with ability to identify, document, and reproduce critical defects. Collaborated with cross-functional teams to ensure high-quality releases and improved test coverage.

TECHNICAL SKILLS

- Strong understanding of SDLC and STLC
- Hands-on experience in Functional, Non-Functional, Regression, smoke, and sanity testing
- Writing detailed Test Cases, Test Scenarios, and Bug Reports
- Experience with Black Box, White Box, and Gray Box testing techniques
- Bug Tracking & Defect Management: Jira, ClickUp, Trello
- API Testing using Postman (GET, POST, PUT, DELETE Requests)
- Load Testing using JMeter
- Database Testing, Chrome DevTools
- Basic hands-on knowledge of Playwright automation and SQL validations
- End-to-End Testing of Web Modules
- UI/UX Verification & Website Audit
- End-to-End Testing, SaaS & PaaS Testing
- Continuous Integration & Continuous Testing
- Cross-Browser & Cross-Device Testing
- Experience with Web & Mobile Application Testing
- Familiar with Agile & Scrum Methodologies
- Strong analytical and problem-solving skills
- Clear and concise documentation & reporting skills

PROFESSIONAL EXPERIENCE

HATZS Dimensions Pvt. Ltd. | Associate SQA Engineer | Dec 2025 – Present

- Delivered end-to-end software quality assurance across CRM, SaaS, AI-powered, and web-based applications to ensure stable, reliable, and user-friendly product releases.
- Designed and maintained test cases, test scenarios, test plans, QA reports, defect reports, and regression testing documentation based on business requirements and user workflows.
- Performed manual testing, functional testing, regression testing, smoke testing, sanity testing, API testing, UI/UX testing, cross-browser testing, and responsive testing.
- Validated critical business workflows, including lead management, appointment scheduling, customer communication, AI calls, AI chats, dashboards, forms, filters, booking flows, and notification modules.
- Reported and tracked defects with detailed reproduction steps, screenshots, logs, severity, priority, expected results, actual results, and business impact.
- Collaborated with developers, product teams, and stakeholders to verify bug fixes, clarify requirements, identify enhancements, and improve overall product quality.
- Performed detailed requirement analysis and workflow validation to ensure application behavior aligned with business rules, user expectations, and client requirements.
- Supported release quality by performing bug verification, retesting, impact analysis, and regression checks after fixes to reduce production issues and improve product stability.

NEXSkills Training Institute | SQA Intern | Sep 2024 – Nov 2025

- Completed hands-on SQA training covering SDLC, STLC, QA/QC, manual testing, functional testing, regression testing, smoke testing, exploratory testing, and test documentation.
- Designed and executed test cases, test scenarios, and test plans using industry-standard test design techniques, including boundary value analysis, equivalence partitioning, decision tables, and use case testing.
- Practiced bug reporting, defect tracking, defect lifecycle management, severity/priority analysis, SQL validation, cross-browser testing, mobile testing, and JIRA-based defect management.
- Gained practical exposure to API testing concepts, request/response validation, HTTP methods, and backend workflow verification using testing tools such as Postman.
- Strengthened understanding of Agile/Scrum testing practices, sprint-based QA activities, requirement analysis, test execution, defect reporting, and release validation.

PROJECTS

DealerIQ AI – AI-Powered Automotive CRM

- Performed complete end-to-end QA testing of DealerIQ AI, a core automotive CRM platform, covering AI calls, AI chats, lead management, appointments, customer communication, dashboards, and critical business workflows.
- Executed functional, regression, smoke/sanity, API, UI/UX, cross-browser, responsive, and workflow testing to validate product stability and release readiness.
- Tested AI call and chat flows, including automated responses, lead capture, appointment booking, call statuses, no-answer/failed call scenarios, duplicate messages, and conversation accuracy.
- Verified CRM functionality across forms, filters, search, dropdowns, validations, permissions, navigation, dashboard data, and error handling.
- Reported and reproduced defects with clear steps, screenshots, severity, expected/actual results, logs, and business impact, and collaborated with developers to verify fixes.

Befer AI – AI-Powered Lead & Appointment Management System

- Performed end-to-end QA testing of Befer AI CRM, covering leads, customers, dashboards, bookings, services, subscriptions, AI chat, dialer, and appointment workflows.
- Created and executed test cases, test scenarios, QA reports, and regression test documentation to validate business workflows and product quality.
- Tested core CRM features including lead capture, appointment scheduling, booking pages, iframe links, service area validation, AI chat responses, dashboard metrics, and dialer call statuses.
- Reported and reproduced defects with clear steps, screenshots, severity, expected/actual results, and business impact, while collaborating with developers to verify fixes.

Leadly.ai – Property CRM

- Performed end-to-end QA testing of Leadly.ai Property CRM, covering lead pipeline, voice calls, scheduled calls, proposals, dashboard, chat, properties, filters, and responsive layouts.
- Created and executed test cases, test scenarios, QA reports, and regression test documentation to validate CRM workflows and release quality.
- Tested core workflows including lead creation, lead filters, call history, scheduled calls, proposal generation, dashboard validation, chat modules, and property management features.
- Reported and reproduced defects with clear steps, screenshots, severity, expected/actual results, and business impact, followed by regression testing after fixes.

EDUCATION

Bachelor in Software Engineering

- Superior University Gold Campus Lahore

Certification in Software Quality Assurance

- NexSkill Training Center, Arfa Karim Tower, Lahore
